

Than Trinh Minh Phuc

Backend Software Engineer

phucttm.dev@gmail.com | 0375 331 022 | github.com/miFu278 | [Portfolio](#)

EDUCATION

FPT University

Bachelor of Software Engineering

Ho Chi Minh City, Vietnam

Aug 2023 – Present

EXPERIENCE

Backend Engineer Intern

Tel4VN

Jan 2026 – May 2026

Ho Chi Minh City, Vietnam

- Developed approximately 50 REST API endpoints in Go for an internal HR management system, covering employee management, attendance, leave management, email, and notifications.
- Designed the backend architecture and PostgreSQL data model, including relationships, migrations, indexes, and JWT-based role-based access control.
- Established a Clean Architecture codebase, repository workflow, and Git conventions while coordinating backend development and API integration within a 7-member cross-functional team.

PROJECTS

Distributed E-Commerce Platform | .NET, RabbitMQ, Redis, PostgreSQL, MongoDB | [GitHub](#)

- Designed and built a six-service .NET e-commerce platform, separating user, product, cart, order, payment, and notification domains with Clean Architecture principles.
- Implemented event-driven communication with RabbitMQ, Redis caching, Ocelot API Gateway, and polyglot persistence with PostgreSQL and MongoDB.
- Orchestrated the distributed application and supporting infrastructure with .NET Aspire and Docker.

RAG Learning Assistant | .NET, PostgreSQL, pgvector, Supabase | [GitHub](#)

- Led backend development for a four-person RAG-based learning platform, implementing the document ingestion, chunking, embedding, and vector retrieval pipeline using PostgreSQL with pgvector.
- Built document-grounded conversational workflows with multi-turn chat history and configurable chunking strategies for uploaded learning materials.
- Developed supporting business logic for document processing, authentication, course management, usage credits, and background processing.

RESEARCH

Latent Surprise Is Protocol-Sensitive: JEPA-Based OOD Detection

Under Review

- First-authored research submitted to FISAT EAI 2026, implementing and evaluating JEPA-based world models for out-of-distribution dynamics detection in reinforcement learning environments.
- Designed reproducible experiments across 10 paired seeds and showed that online EMA score normalization can reverse AUROC-based model rankings between latent and pixel prediction errors.

TECHNICAL SKILLS

Languages: C#, Go, SQL

Backend: ASP.NET Core, REST APIs, Entity Framework Core

Databases: PostgreSQL, SQL Server, Redis

Messaging & Tools: RabbitMQ, Git, Docker
