

Than Trinh Minh Phuc

Backend Software Engineer | Software Engineering Student
phucttm.dev@gmail.com | github.com/miFu278 | mifu278.github.io/portfolio/

SUMMARY

Final-year Software Engineering student targeting AI and Software Engineering roles. Built backend systems, RAG applications, and distributed services, with research on JEPA-based OOD dynamics detection accepted to EAI FISAT 2026. Experienced in backend architecture, AI-assisted development, and building practical software systems.

EDUCATION

FPT University

Bachelor of Software Engineering, GPA: 3.34/4.0

Ho Chi Minh City, Vietnam

Aug. 2023 – Present

EXPERIENCE

Tel4VN

Backend Engineer Intern

Ho Chi Minh City, Vietnam

Jan. 2026 – May 2026

- Developed approximately 50 Go REST API endpoints for an internal HR management system covering employee management, attendance, leave requests, email, and notifications.
- Designed backend architecture and PostgreSQL data model, including relational schemas, migrations, indexes, and JWT-based role-based access control.
- Established Clean Architecture structure, repository workflow, and Git conventions while coordinating backend/API integration in a 7-member cross-functional team.

RESEARCH

Latent Surprise Is Protocol-Sensitive: Evaluating JEPA-Based OOD Dynamics Detection | EAI FISAT 2026

- First-authored research accepted to EAI FISAT 2026, evaluating JEPA-based world models for out-of-distribution dynamics detection in reinforcement learning environments.
- Designed reproducible experiments across 10 paired seeds and showed that online EMA score normalization can reverse AUROC-based model rankings between latent and pixel prediction errors.
- *Accepted – Camera Ready*

PROJECTS

Distributed E-Commerce Platform | .NET, RabbitMQ, Redis, PostgreSQL, MongoDB

[GitHub](#)

- Built a distributed e-commerce platform with six services covering user, product, cart, order, payment, and notification domains using Clean Architecture.
- Implemented asynchronous service communication with RabbitMQ, caching with Redis, and API routing through Ocelot Gateway.
- Applied polyglot persistence with PostgreSQL and MongoDB and containerized the system using Docker and .NET Aspire.

RAG Learning Assistant | .NET, PostgreSQL, pgvector, Supabase

[GitHub](#)

- Led backend development for a learning assistant using Retrieval-Augmented Generation (RAG), including document ingestion, chunking, embedding, and vector retrieval with PostgreSQL pgvector.
- Implemented document-grounded conversational workflows, multi-turn chat history, configurable chunking, authentication, course management, and usage-credit logic.
- Achieved end-to-end query response latency of approximately 2–3 seconds by integrating the Google AI Studio (Gemini) API for answer generation, with background processing for document ingestion workflows.

TECHNICAL SKILLS

Programming: C#, Go, Python, SQL

Software Development: ASP.NET Core, REST APIs, Entity Framework Core, Clean Architecture

Databases: PostgreSQL, SQL Server, Redis, pgvector

Messaging & Tools: RabbitMQ, Git, Docker

AI & Development Tools: RAG, PyTorch, Kaggle, Google Colab, Claude Code, Codex, MCP, Agent Skills & Harnesses

Spoken Languages: Vietnamese (Native), English (EF Set C1)
